(54) Title: ECCENTRIC LUMEN STENTS

(57) Abstract: Embodiments of medical devices (200) are described, such as stents, for dilating passageways. A medical device (200) can include a flexible body (201), having a proximal end (205), a distal end (207), and a longitudinal axis (209). The flexible body (201) can further include a flexible elongate member (212) that is defined by a longitudinally extending aperture (210) in the body (201). The member can be radially expandable with respect to the longitudinal axis (209). The device (200) can also define an eccentric lumen (204), with at least a portion of the eccentric lumen (204) being offset from the longitudinal axis (209).

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
